Sample Problems and Solutions from November 2013 Paper

Providing concrete examples helps illustrate the application of concepts and strategies.

Example 1: Simplify and Solve

Question: Simplify $\frac{3x^2 - 2x - 8}{x - 2}$. For which values of (x) is the expression defined?

Solution:

- Factor numerator: $(3x^2 - 2x - 8)$

Find factors:

[

$$3x^2 - 2x - 8 = (3x + 2)(x - 4)$$

]

- Rewrite expression:

[

$$\frac{(3x + 2)(x - 4)}{x - 2}$$

]

- Since numerator and denominator don't share common factors, the expression cannot be

simplified further.

- The expression is undefined when denominator is zero:

\[

$$x - 2 = 0 \rightarrow x = 2$$

\]

Answer: The simplified form is $\frac{(3x + 2)(x - 4)}{x - 2}$, undefined at $(x = 2)$.

Example 2: Coordinate Geometry

Question: Find the equation of the line passing through $(1, 2)$ and $(3, 8)$.

Solution:

- Calculate gradient:

\[

$$m = \frac{8 - 2}{3 - 1} = \frac{6}{2} = 3$$

\]

- Use point-slope form:

\[

$$y - y_1 = m(x - x_1)$$

\]

Using point $(1, 2)$:

\[

$$y - 2 = 3(x - 1) \rightarrow y - 2 = 3x - 3$$

\]

- Simplify:

\[

$$y = 3x - 1$$

\]

Answer: The equation of the line is $(y = 3x - 1)$.

Example 3: Sequence Calculation

Question What is the TDA method in mental arithmetic? TDA stands for 'Think, Divide, Add,' a mental strategy that helps simplify complex calculations by breaking them into manageable steps. **Answer** How can TDA improve mental arithmetic skills? TDA encourages systematic thinking, making it easier to handle large numbers, reduce errors, and increase calculation speed in mental math. What are common mental arithmetic questions suitable for TDA? Questions involving large sums, multiplications, or divisions, such as 'Calculate $48 + 76$ ' or 'Multiply 23 by 7,' are ideal for applying TDA strategies. Are there specific techniques within TDA to handle addition and subtraction? Yes, TDA involves breaking numbers into parts, such as tens and units, then sequentially adding or

subtracting to simplify the process. Can TDA be used for mental multiplication of large numbers? Absolutely, TDA helps by splitting large numbers into easier components, then multiplying smaller parts before combining the results. What are some practice questions to master TDA in mental arithmetic? Examples include calculating $125 + 376$, or 48×6 , where breaking down the numbers can make mental calculation more manageable. Is TDA suitable for all age groups learning mental arithmetic? Yes, TDA can be adapted for different ages, helping young learners develop foundational skills and advanced students tackle complex problems. How can educators incorporate TDA into mental arithmetic training? Educators can introduce step-by-step exercises, encouraging students to verbalize their thought process and gradually increase the difficulty level.
