A bit (binary digit) is the most basic unit of data in computing, representing a value of 0 or 1. A byte consists of 8 bits, nibble is 4 bits, and word varies depending on the architecture but is generally larger than a byte.

Q2: Which number system is primarily used internally by computers?

- a) Decimal
- b) Binary
- c) Octal
- d) Hexadecimal

Answer: b) Binary

Explanation:

Computers operate using binary systems because their hardware relies on digital circuits that switch between two states: ON and OFF, represented as 1s and 0s. While other systems like hexadecimal are used for ease of reading, binary remains the core.

Q3: What does the acronym 'CPU' stand for?

- a) Central Process Unit
- b) Central Processing Unit
- c) Computer Personal Unit
- d) Central Processor Unit

Answer: b) Central Processing Unit

Explanation:

The CPU is the primary component of a computer responsible for executing instructions and processing data. It acts as the brain of the computer.

Q4: Which of the following is a high-level programming language?

- a) Assembly
- b) Machine code
- c) Python
- d) Binary

Answer: c) Python

Explanation:

Python is a high-level programming language known for its simplicity and readability. Assembly and

machine code are low-level languages, closer to hardware.

- Data Structures and Algorithms

Q5: Which data structure uses LIFO (Last In First Out) principle?

- a) Queue
- b) Stack
- c) Linked List
- d) Array

Answer: b) Stack

Explanation:

A stack follows the LIFO principle, meaning the last element added is the first to be removed. Queues follow FIFO (First In First Out).

Q6: Which algorithm is used for searching an element in a sorted array efficiently?

- a) Linear Search
- b) Binary Search
- c) Bubble Sort
- d) Selection Sort

Answer: b) Binary Search

Explanation:

Binary search divides the array and compares the middle element, reducing the search space efficiently for sorted data, achieving logarithmic time complexity.

- Computer Architecture and Organization

Q7: Which component of a computer is responsible for executing instructions?

- a) RAM
- b) CPU
- c) Hard Drive
- d) Motherboard

Answer: b) CPU

Explanation:

The CPU executes instructions fetched from memory, orchestrating operations within the computer.

Q8: In a typical computer system, what does the ALU stand for?

- a) Arithmetic Logic Unit
- b) Automated Logic Unit
- c) Application Logic Unit
- d) Arithmetic List Unit

Answer: a) Arithmetic Logic Unit

Explanation:

The ALU performs arithmetic and logical operations within the CPU.

- Operating Systems and File Management

Q9: Which of the following is NOT an operating system?

- a) Windows
- b) Linux

c) Oracle

d) macOS

Answer: c) Oracle

Explanation:

Oracle is a database management system, not an operating system. Windows, Linux, and macOS are OS.

Q10: What is the primary purpose of an operating system?

a) To process data

b) To manage hardware and software resources

c) To compile programs

d) To connect to the internet

Answer: b) To manage hardware and software resources

Explanation:

An OS manages hardware components like CPU, memory, storage, and peripherals, providing a platform for applications to run.
