Deep Dive into Core Topics

- Financial Instruments (IFRS 9)

Financial instruments are fundamental to business operations and financial reporting. The IFRS 9 standard introduces a comprehensive model for classification and measurement, impairment, and hedge accounting.

Key Concepts:

- Classification and Measurement: Financial assets are classified into amortized cost, fair value through other comprehensive income (FVOCI), or fair value through profit or loss (FVTPL). The classification depends on the business model and contractual cash flow characteristics.
- Impairment: An expected credit loss model replaces the incurred loss approach, requiring entities to recognize impairment allowances based on expected future losses.
- Hedge Accounting: The standard aligns hedge accounting more closely with risk management strategies, allowing for more transparent reporting.

Practical Application:

- Recognizing and measuring financial assets upon initial recognition.
 - Calculating impairment allowances using simplified or complex models.
 - Documenting hedge relationships and assessing hedge effectiveness.
-
- Revenue Recognition (IFRS 15)

IFRS 15 provides a robust framework for revenue recognition, emphasizing the transfer of control rather than the transfer of risks and rewards.

Steps in Revenue Recognition:

- Identify the contract with the customer.
- Identify the performance obligations within the contract.
- Determine the transaction price.
- Allocate the transaction price to each performance obligation.
- Recognize revenue when (or as) the entity satisfies each obligation.

Key Principles:
