"Given the IP address 192.168.10.0/24, subnet it into four equal subnets."

Answer:

The /24 prefix indicates 255.255.255.0. subnetting into four equal parts requires borrowing 2 bits from the host portion (since $2^2=4$).

- New subnet mask: /26 (255.255.255.192)
- Subnet addresses:
 - 192.168.10.0/26
 - 192.168.10.64/26
 - 192.168.10.128/26
 - 192.168.10.192/26

Each subnet supports 62 usable IP addresses.

- Network Configuration and Device Setup

Assignments often involve configuring devices through command-line interfaces (CLI), setting up IP addresses, enabling interfaces, and verifying connectivity.

Common Cisco 1 Assignment Questions and Model Answers

To aid students, here are some frequently encountered questions with comprehensive answers:

Q1: What is the purpose of subnetting, and how does it improve network efficiency?

Answer:

Subnetting divides a large network into smaller, manageable segments called subnets. This segmentation enhances network performance by reducing broadcast domains, limiting traffic to specific segments, and improving security. It allows better utilization of IP address space, prevents IP wastage, and simplifies network management. For example, subnetting a Class C network into multiple /28 subnets creates smaller networks suitable for individual departments or offices.

Q2: Explain the concept of the OSI model and its relevance in networking.

Answer:

The OSI (Open Systems Interconnection) model is a conceptual framework that standardizes networking functions into seven layers: Physical, Data Link, Network, Transport, Session, Presentation, and Application. It facilitates interoperability between different network devices and protocols by defining clear roles for each layer. For instance, TCP/IP protocols map to specific OSI layers, helping troubleshoot issues by isolating problems to particular layers.

Q3: How does DHCP work, and why is it vital for network management?

Answer:

DHCP (Dynamic Host Configuration Protocol) automatically assigns IP addresses, subnet masks, default gateways, and DNS servers to devices when they connect to a network. This automation reduces manual configuration errors, simplifies network expansion, and ensures efficient IP address

utilization. When a device joins the network, it broadcasts a DHCP Discover message; the DHCP server responds with an IP lease, facilitating seamless connectivity.
