 - Air filters should be inspected periodically and replaced if clogged.
- Lubricating Moving Parts:
 - Follow manufacturer guidelines for lubrication points, typically involving door hinges and rotor shafts.
- Inspecting Electrical Connections:
 - Ensure wiring is intact and connectors are secure.
- Verifying Safety Features:
 - Test lid lock mechanisms and imbalance sensors regularly.

Calibration Procedures

Calibration ensures that the displayed speed and RCF values match actual values, critical for experimental reproducibility. The process involves:

- Using a calibrated tachometer to verify rotor speed.
- Measuring temperature accuracy with traceable thermometers.
- Adjusting control parameters or sending the device for professional calibration if discrepancies are detected.

Calibration intervals depend on usage frequency but are generally recommended at least once annually or after any major repair.

Troubleshooting Common Issues

Operational Problems and Solutions

- Device Does Not Power On:
 - Check power cord and outlet.
 - Inspect internal fuses; replace if blown.
 - Verify circuit breaker status.
- Error Messages or Alarms:
 - Alarms for imbalance: ensure samples are evenly loaded.

- Over-temperature alarm: verify cooling system functionality.
- Motor overload: reduce load or check rotor integrity.
- Unusual Noise or Vibration:
 - Confirm rotor is properly seated.
 - Inspect for rotor imbalance or damage.
 - Check for loose components.
- Inaccurate Speed or Temperature Readings:
 - Recalibrate sensors.
 - Verify calibration procedures.

Preventive Measures

- Always load rotors symmetrically.
- Regularly inspect and replace worn parts.
- Follow recommended maintenance schedules.
