Core Concepts in Global Logistics and Supply Chain Management

Defining the Field

At its core, global logistics involves planning, implementing, and controlling the movement and storage of goods, services, and related information across international borders. Supply chain management (SCM), meanwhile, encompasses the broader coordination of all activities involved in sourcing, procurement, production, and distribution.

The key components include:

- Procurement: Sourcing raw materials and components from suppliers worldwide.
- Manufacturing: Transforming inputs into finished goods.
- Transportation: Moving goods via ocean, air, rail, or road.
- Warehousing: Storage facilities that hold inventory before distribution.

A typical global supply chain operates through an interconnected network involving:

- Suppliers: Providing raw materials or components.
- Manufacturers: Assembling or processing these inputs.
- Distributors and Wholesalers: Breaking bulk and managing inventories.
- Retailers: Selling products to consumers.
- Customers: The end-users who drive demand.

The efficiency of this network depends on seamless coordination, data sharing, and strategic planning.
