**Question** What is the purpose of configuring VLANs in a Cisco CCNA student lab? Configuring VLANs helps segment network traffic, improve security, and optimize performance by creating separate broadcast domains within a switch network. How do you verify VLAN configuration on a Cisco switch? Use commands like 'show vlan brief' to display VLANs configured on the switch and 'show vlan id [vlan number]' for detailed information about a specific VLAN. What is the significance of configuring a trunk link between switches? Trunk links carry traffic for multiple VLANs between switches, enabling inter-VLAN communication and expanding network segmentation

across devices. How can students troubleshoot connectivity issues between devices in a CCNA lab? Students can use commands like 'ping', 'traceroute', 'show ip interface brief', and 'show running-config' to diagnose and resolve network connectivity problems. What is the role of DHCP in a CCNA lab environment? DHCP dynamically assigns IP addresses and network configuration parameters to devices, simplifying network management and ensuring devices have correct IP settings. How do you secure access to network devices in a CCNA lab? Implement security measures such as enabling password protection on console and VTY lines, using SSH for remote access, and applying access control lists (ACLs) to restrict unauthorized access. What is the purpose of configuring static routes in a CCNA lab? Static routes manually define specific network paths, enabling devices to communicate with remote networks when dynamic routing protocols are not used or not configured. Why is it important to save your configuration after making changes in a Cisco CCNA lab? Saving the configuration with the 'copy running-config startup-config' command ensures that your settings persist after a device reboot, preventing loss of configuration changes.

- Trunk port not allowing VLANs.
- Incorrect subinterface configurations on routers.

Answer Lab Insights:

- VLAN IDs must match on trunk links.
- The 'show interfaces trunk' command verifies trunk status.
- Inter-VLAN routing requires subinterfaces with correct encapsulation.

### Lab 3: Implementing ACLs for Security

Objective: Configure ACLs to permit or deny specific traffic types.

Steps Involved:

- Creating standard or extended ACLs.
- Applying ACLs to interfaces in the correct direction.
- Testing with ping and access attempts.

Common Troubleshooting Points:

- Applying ACLs in the wrong direction.
- Forgetting to enable ACLs on the right interface.
- Overly restrictive ACLs blocking legitimate traffic.

Answer Lab Insights:

- Always specify the correct source/destination IPs and protocols.
- Use 'show access-lists' to verify ACLs.
- Remember that ACLs are processed top-down; order matters.

### Tools and Commands for Effective Lab Completion

Proficiency with the following commands is essential for successful CCNA Discovery 2 labs:

- Configuration Commands: ``configure terminal``, ``interface``, ``vlan``, ``ip address``, ``no shutdown``.
- Verification Commands: ``show ip interface brief``, ``show vlan brief``, ``show running-config``, ``show ip route``, ``show access-lists``.
- Troubleshooting Commands: ``ping``, ``traceroute``, ``debug``, ``show cdp neighbors``, ``show ip protocols``.

Mastering these commands streamlines lab work and enhances troubleshooting efficiency.
