- Increased government spending raises aggregate demand
- Graphically, the AD curve shifts rightward
- Equilibrium output increases, and the price level may rise depending on the AS curve slope

2. The IS-LM Model and Fiscal Policy

Solutions in this section typically involve solving for equilibrium interest rates and output levels.

Sample problem:

Given certain fiscal policy parameters, determine the new equilibrium in the IS-LM model.

Solution approach:

- Write down the IS and LM equations
- Substitute known values
- Solve simultaneously for interest rate and output

3. The Solow Growth Model

Problems often focus on steady-state analysis and the effects of technological progress.

Example:

What is the impact of increased savings rate on long-term economic growth?

Solution summary:

- Higher savings rate increases capital accumulation
- Leads to a higher steady-state level of capital and output per worker

- Affects the long-term growth rate only if technological progress is considered

4. Unemployment and Inflation Dynamics

Solutions involve understanding the Phillips Curve and expectations-augmented models.

Example:

Calculate the short-term trade-off between inflation and unemployment given certain parameters.

Method:

- Use the Phillips Curve equation
- Incorporate expectations and adaptive or rational expectations as needed

Strategies for Effectively Using Solutions

1. Practice Before Consulting Solutions

Attempt problems independently to develop problem-solving skills. Use solutions to check your work and understand errors.
