## Basic Macro Structure

A simple VBA macro in CATIA typically has the following structure:

```
``vba

Sub MyFirstMacro()

' Declare variables

Dim product As Product

' Set the product to the active document

Set product = CATIA.ActiveDocument.Product

' Perform actions, e.g., display a message

MsgBox "Hello from CATIA VBA!"

End Sub

``
```

This template can be expanded to automate complex tasks.

## Core Concepts and Techniques in CATIA VBA

### Accessing CATIA Objects

At the heart of CATIA VBA scripting is understanding how to access and manipulate objects within

the application. The primary object is `CATIA`, which represents the application itself. From there, you navigate to documents, products, parts, features, and parameters.

- ActiveDocument: Refers to the currently open document, such as a product or part.
- Products and Parts: Use `ActiveDocument.Product` or `ActiveDocument.Part` to access the geometry.
- Selections: You can select objects within CATIA to manipulate or analyze.

## Common Operations in VBA

- Creating and Modifying Geometry: Automate the creation of points, lines, surfaces, and features.
- Parameter Management: Read or update parameters within parts or assemblies.
- File Operations: Save, close, or export documents via scripts.
- Iterating through Collections: Loop through features, bodies, or parameters.

### Example: Extracting Parameters from a Part

```
``vba

Sub GetParameterValue()

Dim partDoc As PartDocument

Dim part As Part

Dim parameters As Parameters

Dim param As Parameter

Set partDoc = CATIA.ActiveDocument

Set part = partDoc.Part

Set parameters = part.Parameters

For Each param In parameters

Debug.Print param.Name & ": " & param.ValueAsString
```

Next

End Sub

...

This script lists all parameters in the active part document in the Immediate window.

## Practical CATIA VBA Scripts and Tutorials

### Automating a Basic Part Creation

One of the first projects for VBA beginners is automating the creation of a simple part with predefined dimensions.

Steps:

- Open a new part document.
- Use VBA to create a sketch, draw a rectangle, and extrude it into a solid.

```

```
Dim bodies As Bodies
```

```
Dim partBody As Body
```

```

```

```
Dim sketch As Sketch
```

```
Dim factory As Factory2D
```

Dim pad As Pad

Set partDoc = CATIA.Documents.Add("Part")

Set part = partDoc.Part

Set bodies = part.Bodies

Set partBody = bodies.Add()

Set sketches = partBody.Sketches

' Create a new sketch on XY plane

Set sketch = sketches.Add(part.OriginElements.PlaneXY)

Set factory = sketch.OpenEdition()

' Draw rectangle

factory.CreateLine 0, 0, 50, 0

factory.CreateLine 50, 0, 50, 30

factory.CreateLine 50, 30, 0, 30

factory.CreateLine 0, 30, 0, 0

sketch.CloseEdition

' Pad (extrude) the rectangle

Set pad = part.ShapeFactory.AddNewPad(sketch, 20)

part.Update
