Example Problem and Solution

Suppose an engineering firm in Canada is evaluating two options for replacing equipment:

- Option A: Continue operating existing equipment with ongoing maintenance costs.
- Option B: Purchase new equipment with higher initial cost but lower operating costs.

Solution Steps:

- Step 1: Gather data?initial cost, operating costs, salvage value, project life, discount rate.
- Step 2: Calculate the present worth of costs for both options over the project life.
- Step 3: Compare the present worths; the lower cost indicates a better investment.
- Step 4: Consider qualitative factors and risk.

Using Canadian interest rates and local cost data ensures the solution's relevance.
