FE EXAM SAMPLE QUESTIONS ENVIRONMENTAL

FE exam sample questions environmental are an essential resource for aspiring environmental engineers preparing for the Fundamentals of Engineering (FE) exam. This exam, administered by the National Council of Examiners for Engineering and Surveying (NCEES), is a crucial step toward becoming a licensed professional engineer (PE). To succeed, candidates need to familiarize themselves with the types of questions they will encounter, particularly in the environmental discipline, which covers a broad spectrum of topics including water resources, air quality, environmental systems, and regulatory frameworks.

In this comprehensive guide, we will explore common sample questions, their structure, and tips for effective preparation. Whether you're just starting your review or looking to refine your understanding, this article provides valuable insights into environmental FE exam questions and how to approach them.

Understanding the Structure of Environmental FE Exam Questions

The environmental discipline of the FE exam typically consists of multiple-choice questions that test your knowledge across various topics. These questions are designed to assess your ability to apply fundamental engineering principles to real-world environmental problems.

Types of Questions You Can Expect

The questions generally fall into the following categories:

- **Theoretical Questions:** These test your understanding of core concepts, such as fluid mechanics, thermodynamics, and environmental chemistry.
- **Application-Based Problems:** These require applying principles to solve practical problems, such as designing a treatment system or analyzing pollutant dispersion.
- **Regulatory and Standards Questions:** These focus on environmental laws, regulations, and standards, including EPA regulations and compliance procedures.
- **Data Interpretation:** Questions involving graphs, tables, and charts related to environmental data, requiring analysis and interpretation.

Question Format and Time Management

Each question is a multiple-choice, with four options per question. The exam duration is typically 6 hours, including break times, so efficient time management and familiarity with question formats are vital.

Sample Environmental FE Exam Questions and Solutions

Below are several sample questions representative of what you might encounter on the exam, along with explanations to help you understand how to approach them.

Sample Question 1: Water Treatment Design

Question:

A municipal water treatment plant needs to reduce the turbidity of raw water from 50 NTU to less than 1 NTU before distribution. If the removal efficiency of the coagulation process is 90%, what is the minimum initial turbidity that can be effectively treated using this process?

- A) 10 NTU
- B) 50 NTU
- C) 100 NTU
- D) 500 NTU

Solution:

The removal efficiency (RE) is given as 90%, which means the process reduces the turbidity by 90%. The relationship is:

$$\text{Final Turbidity} = \text{Initial Turbidity} \times (1 - \text{RE})$$

Rearranged to find the initial turbidity:

$$\text{Initial Turbidity} = \frac{\text{Final Turbidity}}{1 - \text{RE}}$$

Plugging in the numbers:

$$\text{Initial Turbidity} = \frac{1 \text{ NTU}}{1 - 0.9} = \frac{1}{0.1} = 10 \text{ NTU}$$

Since the initial turbidity must be at least 10 NTU for the process to achieve less than 1 NTU, the

minimum initial turbidity that can be effectively treated with 90% removal efficiency is 10 NTU.

Answer: A) 10 NTU

Sample Question 2: Air Quality Regulation

Question:

Under the Clean Air Act, a facility is required to limit its emissions of sulfur dioxide (SO₂) to 0.10 lb/MMBtu of heat input. If a boiler consumes 100 MMBtu of heat per hour, what is the maximum allowable SO₂ emission rate in pounds per hour?

A) 10 lb/hr

B) 1 lb/hr

C) 0.1 lb/hr

D) 0.01 lb/hr

Solution:

The maximum emission rate is calculated as:

$$\text{Emission Rate} = \text{Emission Limit} \times \text{Heat Consumption}$$

$$= 0.10 \, \text{lb/MMBtu} \times 100 \, \text{MMBtu/hr} = 10 \, \text{lb/hr}$$

Answer: A) 10 lb/hr

Sample Question 3: Environmental Chemistry

Question:

Which of the following is the primary process responsible for removing nitrogen oxides (NO_x) from flue gases in a selective catalytic reduction (SCR) system?

A) Oxidation to nitrogen dioxide (NO₂)

B) Reduction to nitrogen gas (N₂)

C) Absorption into water

D) Adsorption onto activated carbon

Solution:

In an SCR system, ammonia (NH₃) reacts with NO_x gases in the presence of a catalyst to convert them into nitrogen (N₂) and water. The primary process is reduction:

Answer: B) Reduction to nitrogen gas (N₂)
