Introduction to Seismic Reflection Methodology

Seismic reflection surveying is a geophysical technique that involves generating seismic waves and analyzing their reflected signals from subsurface interfaces. When an energy source (such as dynamite, vibroseis, or air guns) induces seismic waves, these waves travel through Earth's layers, reflecting and refracting upon encountering changes in acoustic impedance?combinations of density and velocity. Recording these reflections at the surface with arrays of geophones or hydrophones yields data that, when processed, reveals a detailed picture of underlying geological formations.

Why Seismic Reflection?
