Summary: The Stroop Effect study demonstrated the interference in reaction time when naming the ink color of words that spell different colors (e.g., the word "red" printed in blue ink). This work revealed automaticity in reading and laid the groundwork for understanding attentional control and cognitive interference.

Impact: It became a fundamental tool for studying selective attention, cognitive flexibility, and processing speed, influencing both experimental psychology and neuropsychological assessment.

2. The Serial Position Effect (1966) ? Murdock

Impact: This discovery transformed understanding of social cognition, language, and autism spectrum disorders.

Behavioral Economics and Decision-Making

11. Prospect Theory (1979) ? Daniel Kahneman and Amos Tversky
