Core Considerations in RF IC Design

Frequency Range and Performance Goals

The target frequency range (e.g., VHF, UHF, microwave) significantly influences the design approach. Designers must define parameters such as:

- Gain
- Bandwidth
- Linearity
- Noise figure
- Power consumption

These specifications guide the choice of circuit topology, device sizing, and biasing schemes.

Process Technology and Fabrication

Selection of the appropriate process technology (e.g., epitaxial, heterojunction bipolar transistors) impacts device performance:
