Sample Questions and Model Answers Based on the November 2010 Mark Scheme

Sample Question 1: Cell Structure

Describe the roles of the mitochondria and chloroplasts in eukaryotic cells.

Model Answer:

Mitochondria are membrane-bound organelles responsible for producing energy through cellular

respiration. They convert glucose and oxygen into ATP, which supplies energy for cellular activities. Chloroplasts, found in plant cells, are involved in photosynthesis. They contain chlorophyll, allowing plants to capture light energy and convert it into glucose and oxygen. Both organelles have double membranes and contain their own DNA, enabling them to produce some of their own proteins.

Sample Question 2: Enzyme Function

Explain how enzymes catalyze chemical reactions and how their activity can be affected.

Model Answer:

Enzymes accelerate chemical reactions by lowering the activation energy required for the reaction to proceed. They achieve this by providing an active site that binds specific substrates, facilitating their conversion into products. Enzyme activity is affected by factors such as temperature, pH, substrate concentration, and the presence of inhibitors. Optimal conditions maximize activity, while deviations can lead to denaturation or inhibition.
